Modern Landscaping — by CORLISS

Gardens are intimate areas; places set apart from the public eye, in which the owner and his friends find quiet recreation and enjoyment. They are in the nature of outdoor living rooms where plant materials of all kinds, and where any other items associated with out-of-door beauty are arranged for the special pleasure of the owner.

LANDSCAPE CONTRACTING DEPARTMENT

Our Landscape Contracting Department is widely recognized for its expert work in the building of roads, walks, garden walls, tennis courts, and other forms of landscape work.

We can furnish the following landscape materials:

Drain Stone, Blue Stone, Blue Stone Dust, Filling, Road Gravel, Cinders, Field and Screened Loom, Compost, Leaf Mold, all sizes of Pasture Stone, all kinds of Flagging, Sub-sail, Calcium Chloride, and Salt Marsh Hay.

A complete foundation planting serves to soften all the unsightly corners and angles to mold the house into the lawn, and give it the appearance of being in a permanent setting.

A Planned Garden Planting

One wouldn't begin to build a house without plans and skilled carpenters. To enhance the value and beauty of your home, our organization has skilled men to develop plans, and carefully trained and experienced men to execute them.

Complete Landscape Service

Our Landscape Department is widely recognized for its expert planting, building of lawns, gardens, roads, walks, walls, tennis courts, and other forms of landscape work. Our tree surgeons are qualified in moving, pruning and spraying of all kinds of trees.

OVERSIZE CLUMPS OBTAINABLE AT SPECIAL PRICES

IMPORTANT—PLEASE READ. All Perennials are perishable. Therefore, express shipments are advisable. Upon receipt, plants should be immediately unpacked and checked. If you are not ready to plant them in permanent places, they should be heeled in, in an upright position, and the roots kept moist until they are planted. This method will keep your plants in prime condition.

Perennials include most of the finest flowering plants as well as the foundation material for practically every well planned garden. They exist in infinite variety, size, and color, and their period of bloom covers the entire season. A well chosen collection of perennials provides a great source of garden interest.

The material we offer is strong, field-grown stock with the exception of some varieties which transplant better from pots.

We strongly advise the purchase of perennials in quantities of 3 or more, since a group of 3 or more plants makes a much more striking and effective color mass in the garden. Please remember that 6 or more plants of one variety may be purchased at the cost per dozen.

Note.—Figures after the description and blooming dates represent the approximate height reached by the perennials under favorable conditions.

Majestic HARDY GARDEN PHLOX

Blooms July, August, September.

The hardy perennial Phlox deserves a prominent place in all hardy flower borders, or where breaks of brilliant colors are required during July, August, and September. For general border decoration, no other family is capable of producing such fine displays of dazzling color at a time when there is little else to depend on. Their large heads of bloom are excellent for cutting, as well.

The immense size and perfect form of the new varieties will be a revelation to those who know only the old-fashioned kinds. We offer the good old and outstanding new varieties, all of which have been tried and tested for desirability and trueness to name. Our collection is the result of careful selection over a period of many years and we confidently recommend it as consisting of the best available varieties.

CULTURE: Phlox will grow and bloom almost anywhere; however, they are gross feeders and if given rich soil and plenty of moisture, best results can be obtained.

To grow Phlox really well, the soil should be well drained, deeply spaded, enriched with rotted manure or bonemeal, and well cultivated. Planting may be done in fall or spring in a sunny border. Set the plants 12 to 15 inches apart. Lift and divide every three or four years or they will become crowded, which results in poor, small flowers. Be sure to **REMOVE** all flower heads before they go to seed. Phlox require considerable **WATER** during the blooming period. **NEVER WATER OVERHEAD**; always keep blooms and foliage dry, letting hose run slowly on the ground. This method of watering prevents mildew.

If mildew appears, indicated by a white powdery substance on the leaves during changeable weather, spray with sulphide of potassium 1 ounce to 3 gallons of water, to which a little soap should be added, or apply a good brand of fine dusting sulphur in early June, using a duster to insure a coating of **BENEATH** as well as above the foliage. Repeat every 2 weeks if needed.
